• The longest wait recorded at each hospital in each month from January 2016 to June 2017 (inclusive).

Please see table above

- 1. Please note: The totals for >60mins minutes would be included in the >30mins, 15 30 minutes and <15mins total also.
- 2. Handover delay data requires a manual button push. Only approximately 80% of all hospital journeys have a button push in A&E department, (by the ambulance crew, the hospital or both). This means 20% of the journeys do not have the handover times recorded and are not represented. Data recording compliance by hospitals ranges from 50% for the least to 95% for the most.

I hope you find this information of some assistance.
